SQL

As an important application closely corrective to data, the database is now the underlying framework of the information system. Now as the most effective approach for data management, database approach has been used in many fields such as society science, industry productivity, science research and our lives. This course takes the process of database system analysis, design, management and application realization as the main line, and pays equal attention to both theory and practice. Its main contents include relational algebra, structured query language SQL, database design, database management and database application system. The course emphasizes the application of database technology, and the methodology of software engineering.

This course is helpful to improve the students' practical ability and the ability to solve problems related to database by applying software engineering methodology.
